

# AI SOP Generator — Jarvis Internal Tool

Turns a client's screen recording transcript into a formatted SOP. Used by Kamilie to generate the "48-hour WOW" deliverable.

---

## How It Works (Step by Step)

### STEP 1: GET THE TRANSCRIPT

Client sends a screen recording. Two options:

#### Option A — Loom (recommended)

- Ask client to record via Loom and share the link
- Loom auto-generates a transcript + AI summary
- Copy the transcript from Loom

#### Option B — Any video file

- Download the recording
  - Upload to [Whisper](#) or use [MacWhisper](#) (free, offline)
  - Get the transcript text
- 

### STEP 2: PASTE INTO CLAUDE WITH THIS PROMPT

Open Claude (claude.ai) and paste:

---

**THE PROMPT (copy this exactly):**

You are a business operations specialist. A client just sent us a screen recording showing how they do a task in their business. Below is the transcript of what they said while recording.

Your job is to turn this into a clean, professional SOP (Standard Operating Procedure) that their new virtual assistant can follow.

**FORMAT:**

- Title: [Task Name]
- Purpose: 1 sentence explaining why this task matters
- Frequency: How often this should be done (infer from context)
- Tools needed: List every tool or platform mentioned
- Steps: Numbered list, specific and actionable. Each step should be written so a new hire with no context can follow it.
- Notes / Exceptions: Any edge cases or things to watch for that the speaker mentioned
- Done when: What "complete" looks like

**RULES:**

- Write steps at a 7th-grade reading level. No jargon.
- If a step is unclear, write it as best you can and add "[Clarify with client]" at the end of that step.
- Do not add steps that weren't in the recording. Only use what was said.
- Keep it under one page.

**TRANSCRIPT:**

[PASTE TRANSCRIPT HERE]

---

## STEP 3: REVIEW AND CLEAN UP

Takes 2 minutes. Check:

- Does the SOP make sense for someone brand new?
- Are there any "[Clarify with client]" flags? If yes, ask client before sending.
- Is it under one page?

---

## STEP 4: SEND TO CLIENT VIA EMAIL 2

Paste the SOP into the Email 2 template (onboarding-email-sequence.md). Do this for the top 2–3 tasks from their audit.

---

## Example Output

**Title:** Client Email Follow-Up

**Purpose:** Ensure no client inquiry goes unanswered for more than 24 hours.

**Frequency:** Daily, Monday–Friday

**Tools needed:** Gmail

**Steps:**

1. Open Gmail and filter by “Unread” emails from the past 24 hours.
2. For each unread email from a client: read it fully before replying.
3. If it’s a simple question you can answer → reply directly. Keep it under 5 sentences.
4. If it needs the owner’s input → forward to [owner’s email] with subject line: “NEEDS YOUR INPUT — [client name]”
5. If it’s a scheduling request → check the owner’s Google Calendar and propose 2–3 available times. Cc the owner.
6. Mark each email as “done” using the label “Handled by VA” after replying.

**Notes:**

- Never delete emails. Archive only.
- If a client sounds upset, do not reply immediately — flag for the owner first.

**Done when:** Inbox unread count is 0 for emails from the past 24 hours.

---

## Time Breakdown for Kamille

| Step                  | Time    |
|-----------------------|---------|
| Get transcript (Loom) | 2 min   |
| Run Claude prompt     | 1 min   |
| Review + clean        | 3–5 min |
| Per SOP total         | ~7 min  |
| 3 SOPs per client     | ~20 min |

Total: about 20 minutes per client. Do this same day the audit comes in.

---

## If Client Doesn't Send a Recording

Use their audit answers instead. Replace "[PASTE TRANSCRIPT HERE]" with:

The client answered the following in their onboarding audit:

Task: [task name from audit]

Hours per week: [X]

Only they can do it: [yes/no/maybe]

What drains them: [their answer]

Please generate a draft SOP for this task. Mark any step with [Assumption] if you had to guess.

This is less accurate but still gives the client something useful to react to.
